

## QD Retroreflektometer

### ZEHNTNER ZRM 6013 RL/QD

- With unique features for the determination of night visibility (RL) and day visibility (Qd) of road markings as well as ambient temperature (°C/°F) and relative humidity (rH %) combined in one compact instrument.
- For all types of road markings

The Zehntner-retroreflektometer ZRM 6013 measures the night visibility (RL) of road markings as seen by a vehicle driver driving with dipped headlights. The illumination simulates the dipped headlights of a vehicle. The day visibility (Qd) of road markings under typical or average daylight or under street lighting is measured with diffused illumination. This makes an objective determination.
